Volunteer Wave

This is a volunteer website

1. First we create a folder by doing all the inital work of next js

2. Then create navbar and footer

3. Then we create the banner section on the banner we put the title of our volunteer website and some information about our website on one side and we use animation on the other side.

4. Then we create the difference section. In this section, we have presented some detailed information about why we are different from other volunteer sites.

5. Then we have shown the volunteer in all fields like: Hospital Volunteer, Literacy Advocate, Senior Companion, etc and have shown the date and some details of when it was uploaded.

6. Then we have created common question section here with answers to some common questions

Live Site : https://volunteer-wave.vercel.app/

Client Side : https://github.com/yeasinbhuiyan/volunteer-wave
